

UEB2

another (better) one!!

powered by the GL823K
Micro SD card slot!

a custom USB 2.0 hub, featuring plenty of ports, alongside a really cool case with a **frosted** acrylic top!

it uses the Core Chips SL2.1S as the main hub IC, a GL823K for SD card stuff, and plenty of esd protection (an important lesson to learn 🤔). also has an actual receptacle so you don't have to BYOC (bring your own cable)
